SUMMARY

Analytics and Data Engineer with 10+ years of experience building reliable, scalable data models and semantic layers that power company-wide decision-making. Expertise in Python, advanced SQL, Airflow, Tableau, and cloud technologies, with a proven track record of improving data quality, optimizing data warehouse performance, and enabling self-service analytics for finance and business operations.

PROFESSIONAL EXPERIENCE

Millennium Management

Miami, FL

Data Engineer

Jun 2023 - Present

- Designed and productionized cloud-native analytics pipelines on AWS, integrating data from multiple sources using SQL, Python, and Airflow to automate workflows, improve data reliability, and enable self-service analytics for 30+ business users
- Created dimensional models, reusable semantic models, and curated data marts for Finance and Business Development reporting, improving query performance by 4–6× and reducing delivery of new metrics from 1 week to 2 hours
- Owned the portfolio manager acquisition cost metrics framework, leading business logic, data modeling, and executive reporting for the CIO Office to support deal negotiations and strategic planning across \$100M+ in annual budget allocations
- Built automated reconciliation and entity-resolution workflows using a knowledge graph database to detect duplicate records and data quality issues, reducing production data incidents by 50%
- Leveraged AI-assisted development tools such as Cursor and Claude Code to accelerate code generation, testing, debugging and documentation, increasing productivity and development speed

Goldman Sachs

New York, NY

VP, Business Intelligence Engineer

Jun 2018 - Jun 2023

- Designed dimensional data models, ETL pipelines, and 15+ Tableau dashboards, standardizing reporting across trade lifecycle within the Equities line of business
- Replaced legacy custom code in the firm's sales commission allocation platform with a low-code architecture using Alteryx, saving approximately \$1M annually while improving transparency and maintainability
- Acted as strategic analytics partner to senior leadership, translating ambiguous business requirements into actionable insights through ad-hoc analysis, scenario modeling, and executive-level reporting to support data-driven decision-making
- Improved data consistency and reporting quality through close collaboration with Engineering, Finance, and Operations

Bank of America Merrill Lynch

New York, NY

AVP, Change Management Program Lead

May 2016 - Jun 2018

- Managed a \$50M+ portfolio of Technology and Operations initiatives, driving execution, governance, and delivery across the program lifecycle
- Translated business requirements into scalable implementation plans in partnership with Engineering, Finance, HR, and Operations
- Ran executive governance reviews with 20+ stakeholders, managing risk, dependencies, and milestone tracking
- Established KPI frameworks and operating models that improved execution transparency across the portfolio

Finance Management Associate Analyst (leadership development rotational program)

Jul 2015 - Apr 2016

- Supported FP&A planning, compensation forecasting, and executive reporting for Global Wealth & Investment Management business
- Analyzed balance sheets and income statements to identify performance drivers and inform strategic planning for Merrill Lynch, Pierce, Fenner & Smith broker-dealer

SELECTED PROJECTS

Trader Entity Resolution Workflow | Designed a graph-based AI entity resolution platform leveraging similarity matching, graph analytics, and LLM-assisted classification to identify duplicate trader records across Salesforce, Appian, and Workday, reducing manual reconciliation efforts by ~50%

Trader Payout Alerts | Led development of a P&L analytics workflow that detects anomalies and sends alerts to the compensation accounting team for proactive review and identification of operational errors, enhancing accuracy and risk management

Equities Client Experience Dashboard | Designed and built an interactive dashboard mapping institutional client onboarding and trade lifecycle workflows within Equities space, uncovering key pain points that helped executives streamline processes and cut onboarding time by 25%

TECHNICAL SKILLS

Programming: Python, SQL • **Data Engineering:** Airflow, ETL/ELT, NiFi, APIs • **Data Modeling:** dimensional modeling, semantic models, PostgreSQL • **Cloud:** AWS (Redshift, RDS, S3) • **AI:** Cursor, Claude Code, vector embeddings, similarity search, prompt engineering, AI evaluation, retrieval-augmented generation (RAG) • **Visualization:** Tableau, Power BI

EDUCATION

Georgia Institute of Technology | OMS in Data Analytics | 18 graduate credits completed
Baruch College, CUNY | BBA in Accounting | May 2014
